### SERVICES PROVIDED

Commissioning Services

[www.colliers.com](http://www.colliers.com)

### PROJECT OVERVIEW

Since August 2009, Colliers has been engaged to provide commissioning services for numerous projects for Yale School of Medicine including Melanoma Laboratory, Vivarium Research Support Lab, Department of Neurology, and Cardio Laboratory at 300 George Street, as well as the Winchester Aquatics Core Laboratory renovation, and the Farnam Memorial Building office renovation.

### SERVICES PROVIDED

As commissioning agent, Colliers verified that the facilities' equipment and systems on each project operated in accordance with design intent and construction documentation. Other responsibilities included verification, testing and documentation of critical containment components, equipment operation and functional testing, and control system calibration and operation, in addition to other performance testing requirements. The Colliers commissioning team also reviewed project documentation and oversaw the development of a comprehensive list of system and functional testing protocol.
